1. Install the app XMEye on your cellphone as the following pic1 shows.

Pic 1

2. Click the XMEye icon to run the application.   As you can see in the following landing surface Pic2.1，there   are two login ways, one is user name login , the other is local login.

(1)Username login: First you need to register an account, add and save the devices under this account. Then you can log in by username directly, monitor and manage the devices.

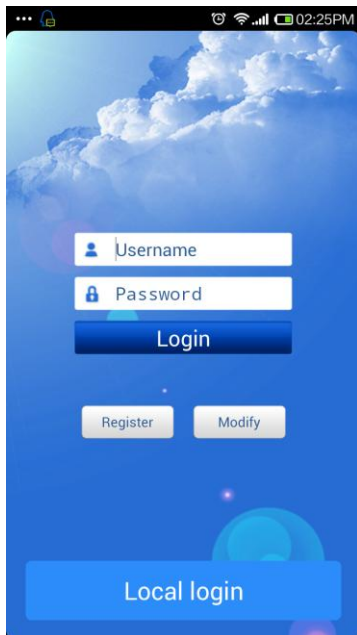

Pic2. 1

(2)Local login: Pic2.2.There are two ways with local login, one is by serial number, the other is by IP /DDNS.
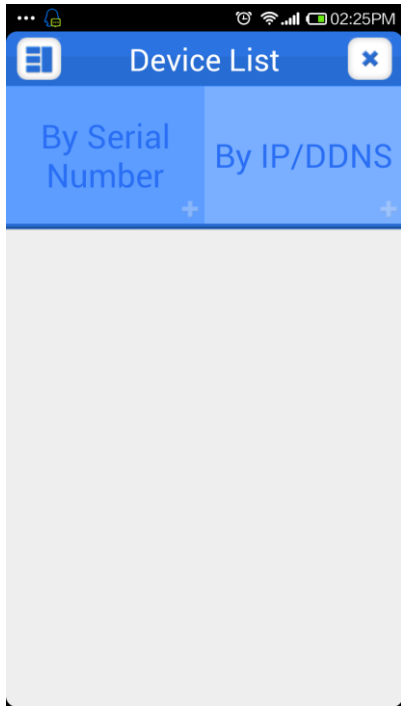

Pic2. 2

- By Serial Number：Pic2.3a, Pic2.3b. You can access the device directly by manually adding the serial number with 16 letters and Numbers; the default user name of terminal device is "admin", the default password is blank .You can also click the "Automatic seach device" icon to add the devices on LAN.

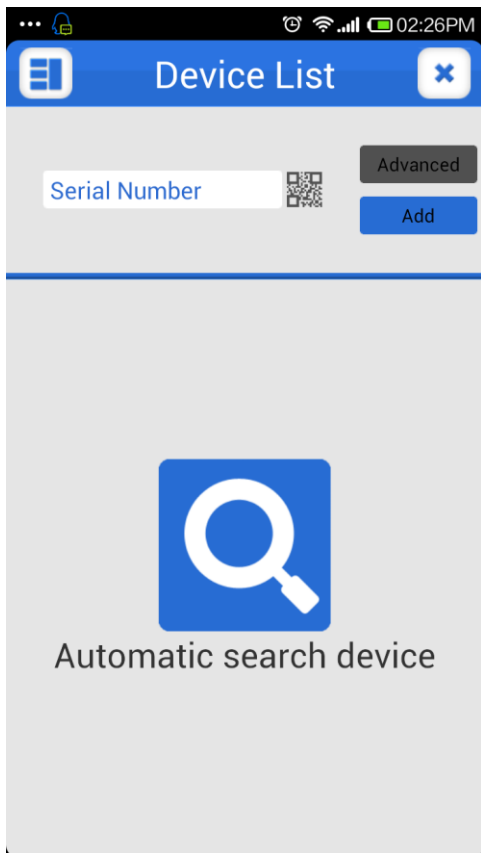

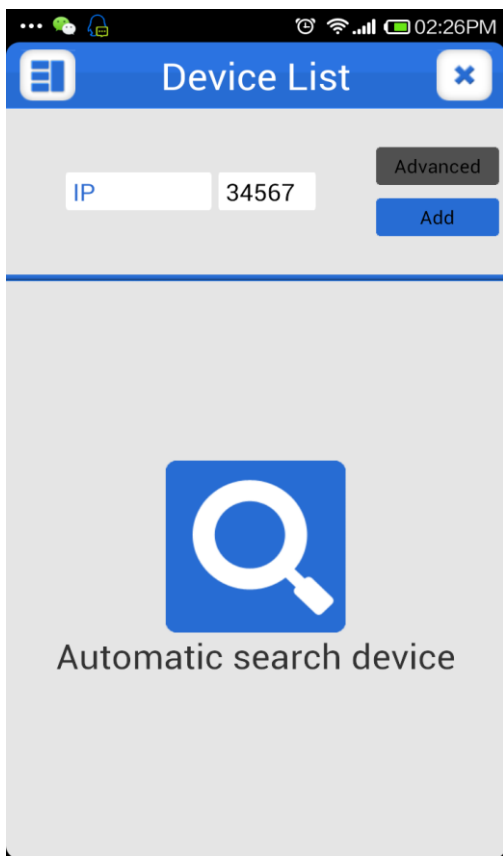

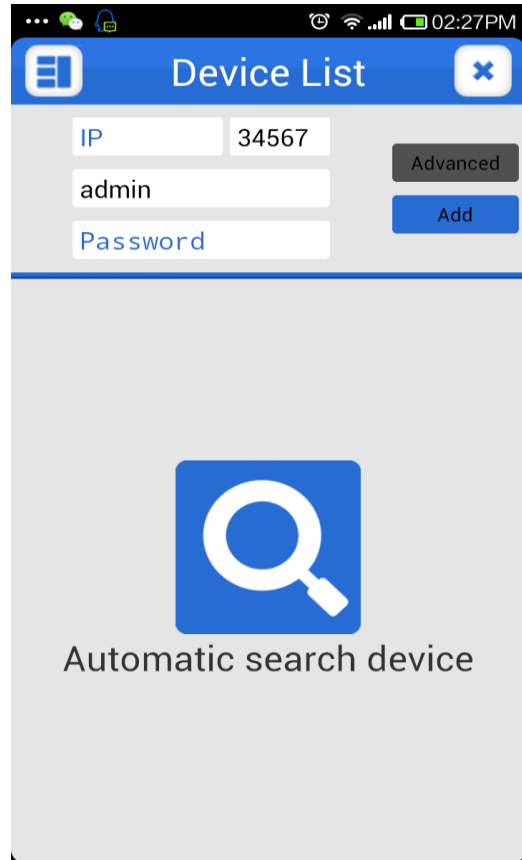

Pic2. 3a
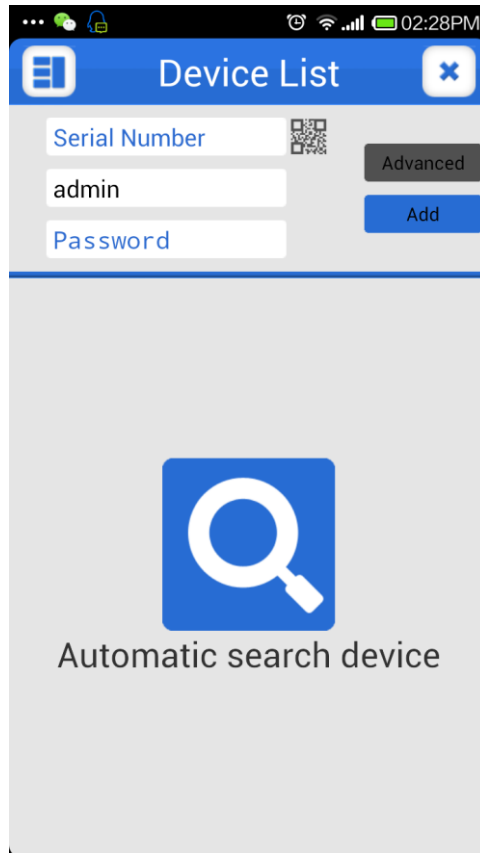

Pic2.3b

● By IP/DDNS：Pic2.4a ,Pic2.4b.It refers to the device's IP address on LAN or the bonding IP and and DDNS to the public network. You can add manually or click "Search" to add the devices on LAN.
