

# Instruction for IE network monitor

This system features a built-in browser-based software that allows you to access your system remotely over your local area network (LAN) or over the Internet (WAN) using Internet Explorer. After Installation of the software through the IE browser, you can operate the DVR remotely and conveniently. DVR supports the visit in LAN and WAN, also supports IP and domain name visiting.

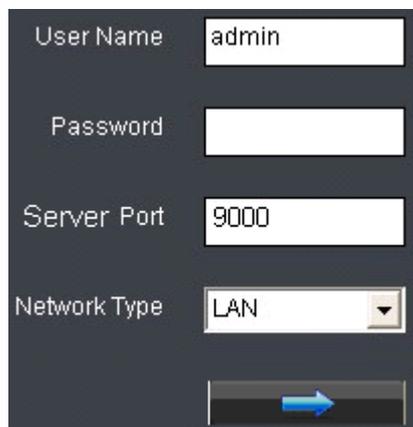

**Note:** To ensure PC's stable visiting of DVR, recommend Windows XP, Windows Vista, Windows 7 operation system, recommend browser as IE 6.0, IE 7.0. IE 8.0.

## 1. Setup ActiveX Plug-In

To access the DVR by IE, you must setup an ActiveX control firstly. You can download this ActiveX plug-in from DVR. To download ActiveX control for your DVR, please start Internet Explorer, input your DVR IP address. IE will inform you to setup IE ActiveX plug-in. After setup, you will see login web page.

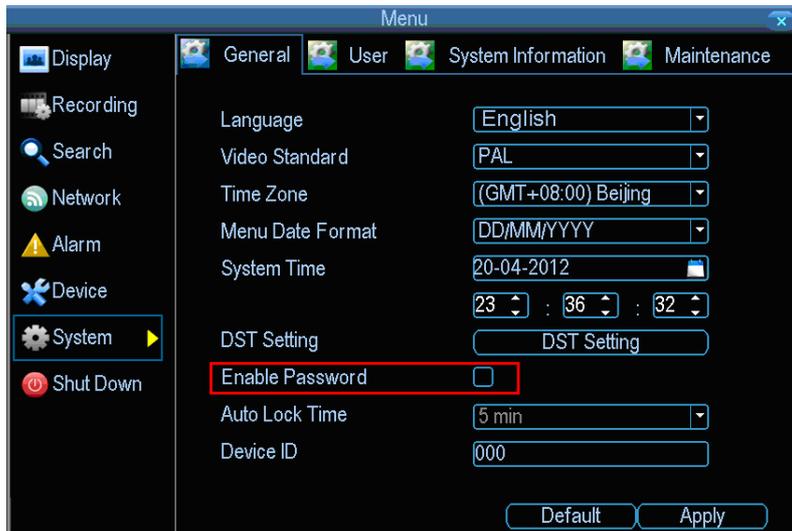

## 2. Login your DVR

After installation of ActiveX Plug-in, you can now access your DVR by IE. First of all, you should login your DVR. To login your DVR, you have to input: **User name**, **Password**, **Server port**. Also, you need to select whether you access your DVR from Local Area Network (LAN) or Internet (WAN).

A screenshot of a login form with a dark background. It contains four input fields: 'User Name' with 'admin' entered, 'Password' (empty), 'Server Port' with '9000' entered, and 'Network Type' with a dropdown menu showing 'LAN'. A blue arrow button is at the bottom.

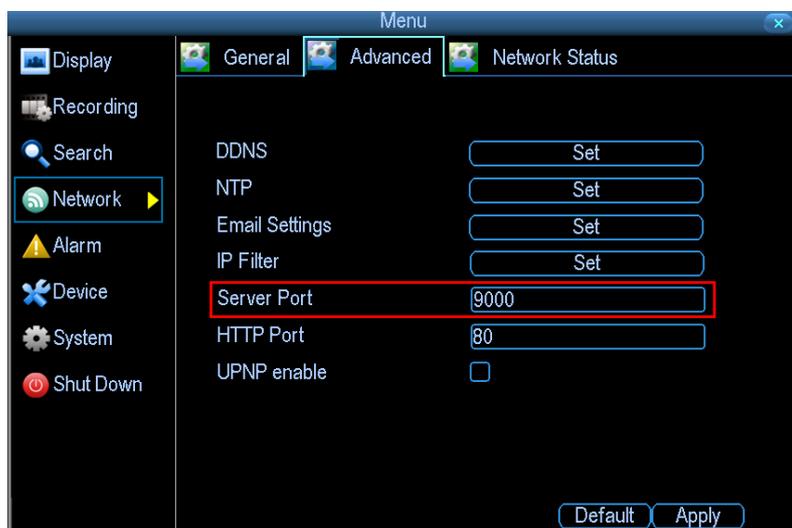

**User Name and Password:** By default, the password is not enabled. That means you don't need

to input user name / password when login the DVR. If you enable the password, you will have to input right user name and password to when login DVR.

By default, DVR only has one account with the name “admin”, and password “12345”. You can modify the password for it and also add a new account in the menu of user management.

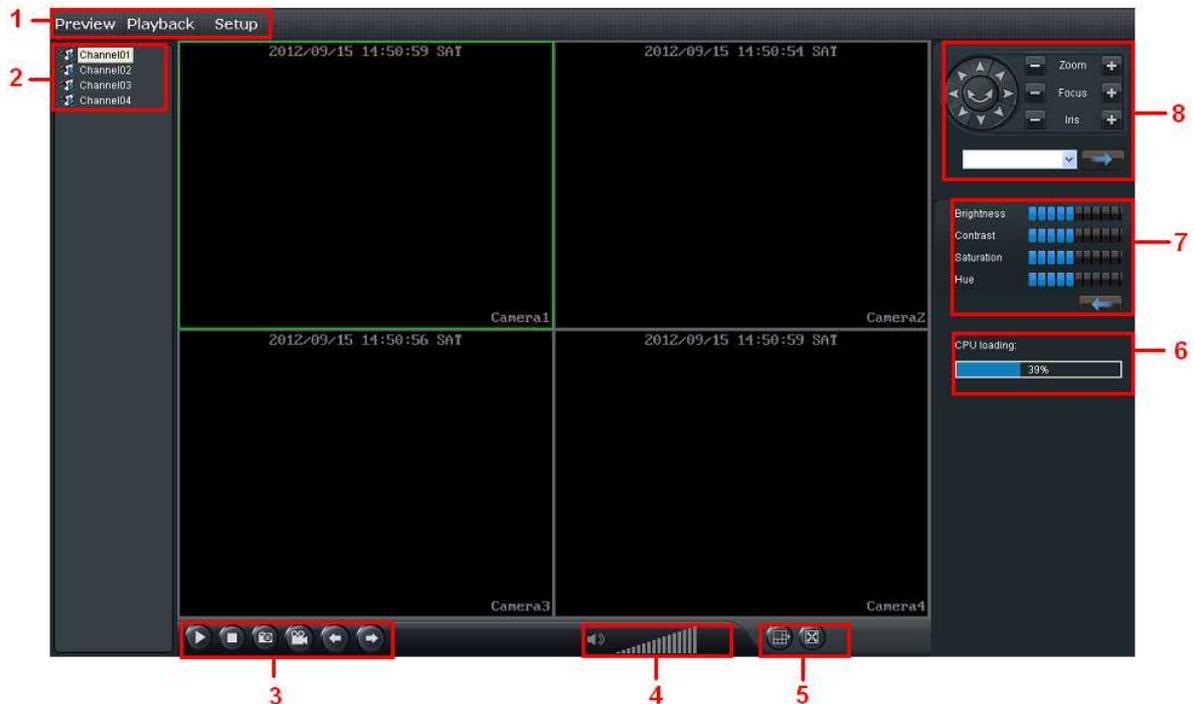

**Server Port:** Here you should fill in the server port of your DVR. The default server port is 9000. To get your DVR server port, please enter the menu of Network Settings.

**Network Type:** You need to select whether you access your DVR from Local Area Network (LAN) or Internet (WAN). If you select LAN, IE will automatically start the main stream preview of all cameras. While if you select WAN, IE will start sub-stream preview. By default, main stream has much higher frame rate and image resolution than sub-stream, but main stream needs much higher network bandwidth than sub-stream. So please make sure to select right network type.

### 3. Live View

Upon login, the Remote Surveillance main screen appears in your browser. By default, remote surveillance opens in Preview mode (split-screen).

- 1) **Modes:** Preview, Playback, and Setup.
